NEOdashboard

Publish
live information
on your website

NEOdashboard provides live or auto updated tailored reports on either your intranet or internet websites.

NEOdashboard's customised reports deliver consistent and real time updated information for management, staff and the public. Dashboards can be easily created using the Dashboard Builder or fully customised with basic knowledge of HTML, CSS and Javascript.

Create powerful dashboard

Automatically update data in seconds

Limitless design and content options

NEOdashboard

Dashboard Builder

Lets you create your own dashboards in minutes to display charts/tables. Just point and click - no coding required.

Full custom design

A couple of lines of HTML is all that is required to display a chart or table.

Fully interactive

You can create interactive web pages that allow you to set alerts, threshold levels etc. Alerts can trigger emails or SMS.
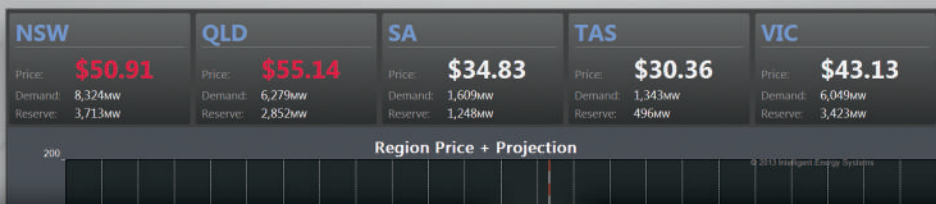

Different views

You can display your data as charts, tables or create your own data-driven elements.
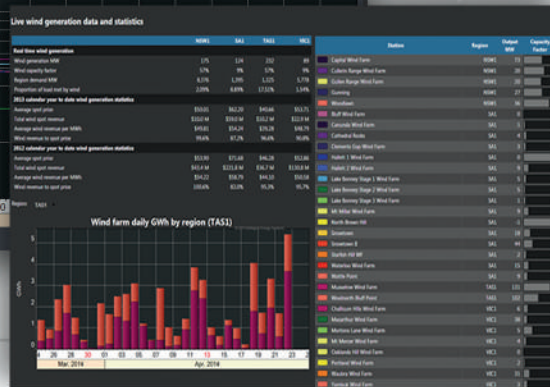

Auto update

All dashboards are automatically updated when there is new data available to display. The update occurs within seconds of new data being available.

IES also provides service to design custom dashboards

In this example we set a price alert. Prices above the level colour the prices red.

This example show Live Generation in a heat map using external data-driven elements.

This example show Live Wind Generation.
